Programming with AI

Programming with AI
at Move

When you ask ChatGPT to generate Sui-Move

Hallucination

Prompt

GPT

How to create
prompt for GPT
to generate Move?

What if you just
copy paste move
into prompt?

What you see at IDE,
powered by
sui-move-analyzer

```
coin::create_currency<MANAGED>(
  witness,
  decimals: 2,
  symbol: b"MANAGED",
  name: b"",
  description: b"",
  icon_url: option::none(),
  ctx
);
```

What AI see if you simply
copy paste the code

```
coin::create_currency<MANAGED>(
  witness,
  2,
  b"MANAGED",
  b"",
  b"",
  option::none(),
  ctx
);
```

Hey GPT, create a coin named Harrision
with 3 decimals, example code
is on the right

GPT:

```
coin::create_currency<MANAGED>(
    witness,
    2,
    b"MANAGED",
    b"",
    b"",
    option::none(),
    ctx
);
```

Create the
right prompt
is the key for SuiGPT

Finished Milestones

1. Convert Move into Annotated Move Code by Sui-Move Analyzer
2. Create Dataset: Process 68 move files with GPT to add comments and store them in a database
3. By user's input, query similar Move code and assemble them in the prompt as reference.
4. Integrated SuiGPT into GPTutor. Make all the above open-source and available by Web API.

Finished Milestones

1. Convert Move into Annotated Move Code by Sui-Move Analyzer
2. Create Dataset: Process 68 move files with GPT to add comments and store them in a database
3. By user's input, query similar Move code and assemble them in the prompt as reference.
4. Integrated SuiGPT into GPTutor. Make all the above open-source and available by Web API.

Created a API to Annotate Move by Sui-Move Analyzer Then add comment by GPT-4

```
coin::create_currency<MANAGED>(
  witness,
  2,
  b"MANAGED",
  b"",
  b"",
  option::none(),
  ctx
);
```

```
// Create a coin symbol MANAGED
coin::create_currency<MANAGED>(
  witness,
  decimals: 2,
  symbol: b"MANAGED",
  name: b"",
  description: b"",
  icon_url: option::none(),
  ctx
);
```

GPTutor / **sui-move-annotation**

Also support module from Bucket Protocol

Finished Milestones

1. Convert Move into Annotated Move Code by Sui-Move Analyzer
2. Create Dataset: Process 68 move files with GPT to add comments and store them in a database
3. By user's input, query similar Move code and assemble them in the prompt as reference.
4. Integrated SuiGPT into GPTutor. Make all the above open-source and available by Web API.

Create Dataset:

68 Sui Move
Smart Contracts
From Sui's Example

Add type
Annotation by API

Add comments,
Generate summery
By GPT-4

Query Dataset

Stored at Elastic Search
Query by user's goal
of the smart contract

Sort by the
relevant score
By AI

Provide relevant
Move code
into prompt

FungibleCoin.move

WhitelistAirdrop.move

SuiGPT

FungibleCoinWhitelistAirdrop.move

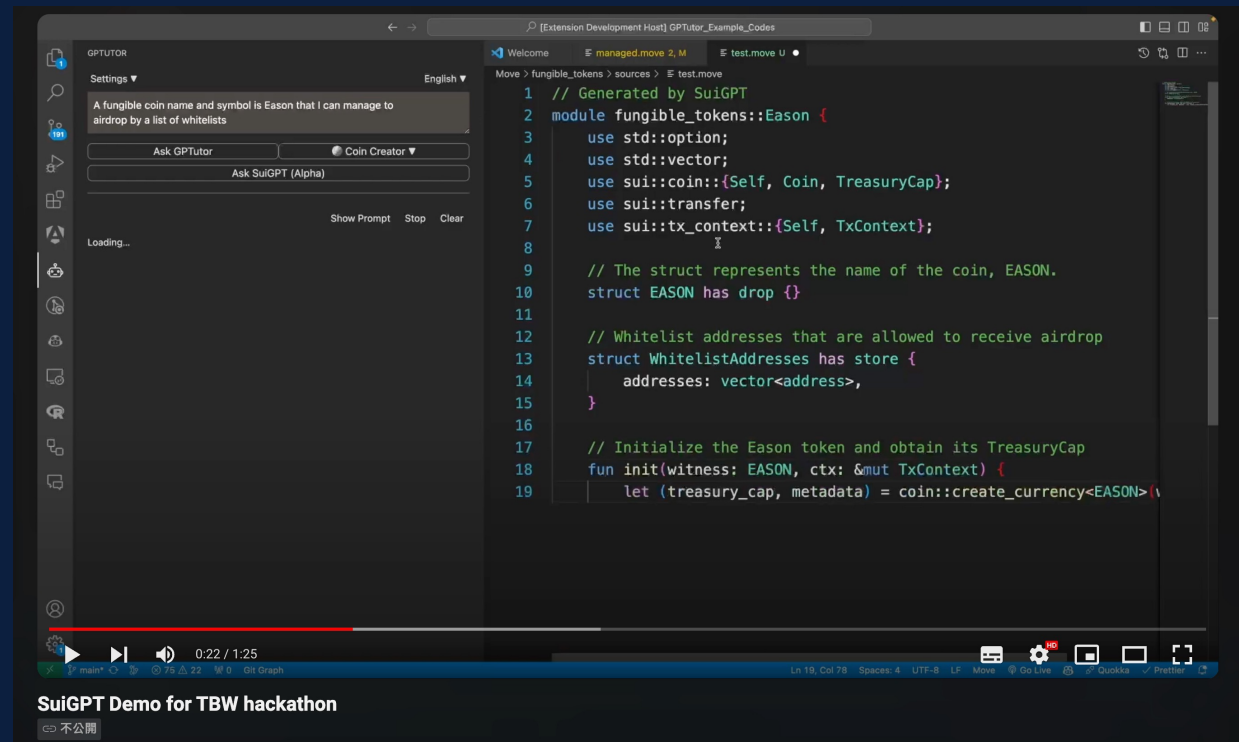

Finished Milestones

1. Convert Move into Annotated Move Code by Sui-Move Analyzer
2. Create Dataset: Process 68 move files with GPT to add comments and store them in a database
3. By user's input, query similar Move code and assemble them in the prompt as reference.
4. Integrated SuiGPT into GPTutor. Make all the above open-source and available by Web API.

Demo Video

Future Milestones

Include more Move code as data

2023
Q4

Train and Evaluate LLMs, such as GPT and CodeLLaMA, with the Move database we created.

2024
Q1

Integrated SuiGPT into a Website so users can access it at browser

2024
Q2?

Integrated SuiGPT into Sui-Move Web IDE to generate move code.

Q&A
